In the United States alone, for example, sports betting has become a significant source of income for bookmakers and other sports related entities. When a bettor places a bet on an event, such as a professional game, the bettor may be given the opportunity to select from a variety of wagers, including parlays, proposition bets, teasers, and other wagers. A parlay is a wager that includes two or more wagers. A parlay may include three or more wagers. In order to make a parlay, the bettor selects one or more of the wagers, and the bettor is given an option to wager on the likelihood of a certain result for at least one of the selected wagers. For example, a bettor may wager on whether a certain player will be the leading scorer in a basketball game. In another example, a bettor may wager on whether a particular team will have a lead of a particular size by a given time. The bettor then selects the second wager and is given the option to wager on the likelihood of a certain result for the second wager. Although some bookmakers provide a listing of multiple parlays for a given event, there is no known industry-wide standard for parlays. One parlay may include two or more wagers, and one or more of the wagers may be relatively small wagers. The listing of multiple parlays may include parlays that are no longer valid, or that have never been offered. For example, a parlay may include two wagers that can be separated from one another only at a price of \$100 or more. Another parlay may include two wagers that can be separated from one another only at a price of \$50 or more. If the price of separating the wagers is only \$1, then there is no reason to separate the wagers. In another example, a parlay may include three wagers that cannot be separated from one another by a price of \$100 or more. Similarly, if the price of separating the wagers is only \$1, there is no reason to separate the wagers. The parlay listing may also include parlays that are invalid because one or more of the wagers in the parlay is invalid. For example, a bettor may select a wager that is unavailable. If a bettor selects a wager that is unavailable, there is no reason to offer the bettor a 82157476af
